

Muhammad Furqan Tahir

Software & Automation Engineer

Rawalpindi, Pakistan | +92 315 0727514 | furqantahir2222@gmail.com

Portfolio: furqan-portfolio2.vercel.app | GitHub: github.com/furqan-ops | LinkedIn: linkedin.com/in/furqan-ops

SUMMARY

Software & Automation Engineer building multi-agent AI systems, resilient data pipelines, and internal tools with Python, n8n, and Playwright. Focused on production reliability: confidence scoring for data accuracy, exponential backoff error recovery, and measurable ROI (cut manual business operations by 75%+).

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML5/CSS3

Automation & AI: Multi-Agent Systems, n8n, Playwright, Selenium, LLM Prompting & Function Calling

Web & Databases: Next.js 15, Streamlit, Supabase (PostgreSQL), React, Node.js, Tailwind CSS, Firebase

Tools & Ops: Git/GitHub, Docker, Power BI, Google Apps Script, REST/Sheets APIs, ERPNext, Vercel

EXPERIENCE

Data Operations Analyst (Automation & Data) | *Applivity, Islamabad*

May 2024 – Present

- **Resume Pipeline & OCR Accuracy:** Built an n8n workflow extracting candidate data from Google Drive PDFs to Sheets, cutting manual entry by 75% across 5,000+ applicants. Integrated Claude 3 Haiku for OCR confidence scoring on ambiguous entries—flags low-confidence fields for human review, sustaining >99% extraction accuracy.
- **MedRim Portal Automation:** Wrote Playwright scripts in Node.js to register employee family dependents on MedRim portal without manual form-filling across 200+ employee records; implemented retry budgets and network error recovery.
- **Verified Lead Scraping:** Built Python + Selenium scrapers targeting LinkedIn, Upwork, and industry portals to ingest verified contacts into ERPNext with rotating proxies and exponential backoff (2s–120s) to handle rate-limiting.
- **Hiring & Expense Dashboards:** Created automated Power BI dashboards connected to live Google Sheets data tracking hiring throughput (pipeline → offer → hire) and departmental expenses, replacing manual executive reporting.

PROJECTS

SentinelFlow: Autonomous Incident Response Fleet

github.com/furqan-ops/sentinelflow

- Engineered a multi-agent self-healing fleet (Watchdog, Diagnostician, Remediator) using Gemini 2.0 Flash to triage webhook errors, diagnose root causes (RCA), and auto-patch failing pipeline components in real-time.
- Built an interactive SaaS ops dashboard (Streamlit) monitoring agent cluster latency, incident MTTR, and 99.8% SLA uptime health.

Autonomous Multi-Agent Dining Concierge & Voice Assistant

multi-ai-agents-customer-support.vercel.app

- Full-stack AI concierge handling bookings and dietary queries; routed requests across 7 specialized sub-agents with multi-turn memory, typo auto-correction, and Web Speech API karaoke highlighting (Next.js 15 → Supabase → n8n → Claude/GPT).

Multi-Agent Performance & Cost Governance Center

multiple-agent-governance-dashboard.streamlit.app

- Real-time Streamlit dashboard tracking multi-agent cluster latency, token consumption, and spend. Implemented semantic caching via Supabase pgvector (embedding distance <0.01), cutting repeat query costs by 40%+ with runaway query circuit breakers.

Enterprise Attendance Web App (In Production at Applivity)

applivity-attendance-app.web.app

- Replaced manual paper timesheets for 50+ staff with zero-hosting-cost web app; features separate Employee and Admin portals, live check-in/out stamps, leave approval workflows, and automated monthly payroll hour compilation.

EDUCATION

Bachelor of Software Engineering

International Islamic University, Islamabad

2019 – 2024

CERTIFICATIONS

- Microsoft Power BI Data Analytics
- n8n Workflow Automation Expert
- Claude 101 AI Fluency & Prompt Engineering
- Google Cloud Generative AI Fundamentals
